

## *Color & Quality*

Design in the RGB color mode.

**Bitmap files need to be 100 - 150ppi at actual size.**

Colors come out more vivid with this setting. You can design up to 300ppi.

## *Bleed*

**Extend background images or colors to the blue line.**

## *Live Area*

This is what the audience will see.

**Place important text and images inside this line.**

## *Port Hole Zone*

**Holes should be placed within the zone.**

## *Save File*

**Convert fonts to curves or paths before saving.**

**Save as .png .jpg .pdf .tif .eps .svg**

Before saving remove the instructions & guide layers.
