

## *Color & Quality*

**Design in the RGB color mode.**

**Bitmap files need to be 100 - 150ppi at actual size.**

Colors come out more vivid with this setting. You can design up to 300ppi.

## *Bleed*

**Extend background images or colors to the blue line.**

## *Live Area*

**This is what the audience will see.**

**Place important text and images inside this line.**

## *Save File*

**Convert fonts to curves or paths before saving.**

**Save as .png .jpg .pdf .tif .eps .svg**

Before saving remove the instructions & guide layers.
