## **Color & Quality**

Design in the RGB color mode.

Bitmap files need to be 100 - 150ppi at actual size.

Colors come out more vivid with this setting. You can design up to 300ppi.

## Live Area

This is what the audience will see.

Place important text and images inside this line.

## **Port Hole Zone**

Holes should be placed within the zone.

## Save File

Convert fonts to curves or paths before saving.
Save as .png .jpg .pdf .tif .eps .svg

Before saving remove the instructions & guide layers.
