

Color & Quality

Design in the RGB color mode.
Bitmap images need to be 75 - 150ppi at actual size.
Colors come out more vivid with this setting.

Bleed

If using our Dye Sublimation process add
an additional 1" bleed to all sides.

Live Area

This is what the audience will see.
Place important text and images inside this area.

Hemline

It is suggested that important text not be placed on this line.

Save File

Convert fonts to curves or paths before saving.
Save as .png .jpg .pdf .tif .eps .svg
Before saving remove the instructions & guide layers.
