

Color & Quality

**Design in the RGB color mode.
Bitmap images need to be 75 - 150ppi at actual size.
Colors come out more vivid with this setting.**

Live Area

**This is what the audience will see.
Place important text and images inside this area.
If using our Dye Sublimation process add an additional 1" bleed to all sides.**

Hemline

**Keep images and text 2" from the border edge
to prevent important graphics from falling onto
the hemline or interrupted by a grommet.**

Save File

**Convert fonts to curves or paths before saving.
Save as .png .jpg .pdf .tif .eps .svg
Before saving remove the instructions & guide layers.**
